#### ON THE COVER

Neuropathic pain (NP) is a challenging condition to treat, as the need for new drugs to treat NP is an unmet goal. This report investigated the analgesic potential of a new sulfated disaccharide compound, BIS014. Findings show that oral administration of BIW014 decreases NP in mice, and unlike other options, does not introduce sedation. See Padín, et al, Page 68–83.

The Journal of Pain will publish appropriate images on the journal cover. Selected figures may accompany a submitted manuscript (authors should make a note in the covering letter), or images may be submitted individually. Please present your art for consideration.
